(54) Universal quick connector apparatus for an LCD monitor

(57) A universal connector apparatus (10) comprising a first component and a second component. The first component (12) is fixedly secured to a housing of an LCD monitor (16) and includes a wedge shaped projection or protusion (26) and a first electrical connector (28). The second component (18) forms a docking station and is fixedly secured to any other support surface where the LCD monitor is to be attached and supported from. The second component includes a second electrical connector (32) intended to matingly engage with the first electrical connector. The LCD monitor is attached to the

second component by slidably engaging the wedge shaped protrusion or projection of the first component into a wedge shaped recess formed in the second component. This automatically centers the two electrical connectors before they matingly engage one another and prevents damage to the male pins of the male electrical connector. The apparatus enables an LCD monitor to be quickly and easily attached and released from a support surface incorporating the second component so that the monitor may be used at a different location as may be needed.

INCOMPLETE SEARCH SHEET C

Application Number EP 04 02 2922

Claim(s) searched completely: 1,3-5,7,9-11,13,15,16,18,19,21,22,25,27-29,31,33-35,38,40-42,45 47-49,51,53,54,57-60,62-65,68-71,74-102

Claim(s) not searched: 2,6,8,12,14,17,20,23,24,26,30,32,36,37,39,43,44,46,50,52,55,56,61 66,67,72,73

Reason for the limitation of the search:

- 1. The application documents contain amendments which introduce subject-matter extending beyond the content of the application as filed, contrary to Article 123(2) EPC, a search for these claims would thus be meaningless:
- 1.1 Page 2, line 32 to page 3, line 29 of the original description appears to show the most general disclosure (i.e. with the widest scope) of the first and second engaging member. It is here disclosed though, that the "first component" which is intended to be secured to the screen (see page 3, lines 1,2) includes a "protrusion" (see line 10), which protrusion represents the first engaging member of present claim 57. An engaging member for the (mounting) component which is not a protrusion is not apparent from the original disclosure.

This objection is valid to claims 18,24,30,37,44,50,56,61,73.

1.2 The feature "and wherein the first engaging member and the second engaging member are shaped so as to prevent unintentional decoupling of the display from the support member" has not been disclosed originally.

This objection is valid to claims 2,8,14,20,26,32,39,46,52,67.

1.3 Only engaging portions have been disclosed which are shaped complementary to each other, for example wedge-shaped. Claims 6,12,17,23,36,43,55,66,72 define a leading portion wider than a non-leading portion which is not disclosed, because drawn out of the context of the engaging portions being complementary wedge-shaped.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 04 02 2922

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
